BITREC system

Recently disposal of sludge from wastewater treatment plants become a crucial environmental problem in many countries. In common way, the sludge will be disposed by landfill, however this method would be faced with many difficulties, such as leakage of methane gas & offensive odor, environmental contamination occurred by spilling leachate out, shortage of available land area, etc.

BITREC SYSTEM is an outstanding solution on this problem. This system can produce electrical energy from dehydrated sludge by mixing of municipal wastes and excreta. In addition, as this system can be installed to the existing wastewater treatment plant, you can easily grade up the existing plant as **VALUE PRODUCING PLANT**.

Process Flow
